

GHOSTD Corporation Identity Governance Program – Phase 3 Mover Process

1. Executive Summary

This phase demonstrates the Mover process within the GHOSTD Corporation Identity Governance Program.

An existing employee, Candace Jones, transferred from the Engineering department to the Finance department. As part of the role transition, identity attributes were updated to reflect the employee's new job responsibilities and business function.

Access previously granted for Engineering activities was reviewed and removed where no longer required. New Finance-related access was provisioned according to the organization's role-based access control (RBAC) model. Validation activities were performed to confirm that outdated permissions were removed and that only the access necessary for the Finance Analyst role remained.

This phase demonstrates core Identity Governance controls including role change management, access modification, access removal, access provisioning, least privilege enforcement, and toxic access prevention.

Result: Access was successfully transitioned from the Engineering role model to the Finance role model with no excessive privileges identified. The employee retained only the permissions required to perform Finance Analyst responsibilities.

2. Business Requirement

Employee: Candace Jones

Current Role:

- Software Engineer
- Engineering Department

New Role:

- Finance Analyst
- Finance Department

Required Action:

Remove:

- Engineering Team

- GitHub Developers
- GitHub Enterprise
- Atlassian Cloud

Add:

- Finance Team
- Workday
- NetSuite

Purpose:

Ensure access aligns with new job responsibilities and prevent excessive privilege accumulation.

3. Scope Completed

Area	Completed
User Profile Update	Yes
Engineering Access Removal	Yes
Finance Access Provisioning	Yes
Application Access Update	Yes
Toxic Access Validation	Yes
Mover Documentation	Yes

4. Implementation Steps

Step 1 — Update Candace Jones Profile

Before:

The screenshot shows the Microsoft Entra admin center interface. The left sidebar contains navigation options: Home, Security Copilot agents, Security Copilot chat, Favorites, Entra ID (expanded), Overview, Users, Groups, Devices, Agents, Enterprise apps, App registrations, Roles & admins, and Delegated admin partners. The main content area displays the user profile for Candace Jones. The 'Properties' tab is active, showing the following sections:

- Identity**: Display name (Candace Jones), First name (Candace), Last name (Jones), User principal name (Candace.Jones@camjohnson...), Object ID (181b899d-5be6-49a3-bc2f-02...), Identities (camjohnson78outlook.onmicrosoft.co), User type (Member), Creation type, Created date time (Jun 18, 2026, 2:55 PM), Assigned licenses (View), Preferred language, Sign in sessions valid from date t... (Jun 18, 2026, 2:55 PM), Last password change date time (Jun 18, 2026, 2:55 PM), Invitation state, External user state change date ti..., Password policies, Password profile (View), Authorization info (View).
- Contact Information**: Street address, City, State or province, ZIP or postal code, Country or region, Business phone, Mobile phone, Email, Other emails, Proxy addresses, Fax number, IM addresses, Mail nickname (Candace.Jones).
- Parental controls**: Age group, Consent provided for minor, Legal age group classification.
- Settings**: Account enabled (Yes), Usage location, Preferred data location.
- On-premises**: On-premises sync enabled (No), On-premises last sync date time, On-premises distinguished name, Extension attributes, On-premises immutable ID, On-premises provisioning errors, On-premises SAM account name, On-premises security identifier, On-premises user principal name, On-premises domain name.

The 'Job Information' section is also visible, showing: Job title (Software Engineer), Company name (GHOSTD Corp.), Department (Engineering), Employee ID (GHC027), Employee type (Full-Time), Employee hire date (Jun 18, 2026, 12:00 AM), Employee org data, Office location (Remote), Manager (Mia Carter), and Sponsors.

After:

The screenshot displays the Microsoft Entra admin center interface. The left sidebar shows navigation options like Home, Security Copilot agents, Security Copilot chat, Favorites, and various administrative sections including Users, Groups, Devices, Agents, Enterprise apps, App registrations, Roles & admins, and Delegated admin partners. The main content area shows the user profile for Candace Jones, categorized into Overview, Monitoring, and Properties. The Properties tab is active, showing details under Identity, Contact Information, Parental controls, Settings, and On-premises. The Identity section shows updated information: Display name is Candace Jones, First name is Candace, Last name is Jones, User principal name is Candace.Jones@camjohnson..., Object ID is 181b899d-5be6-49a3-bc2f-02..., Identities is camjohnson78outlook.onmicrosoft.co, User type is Member, Creation type is Jun 18, 2026, 2:55 PM, Created date time is Jun 18, 2026, 2:55 PM, Assigned licenses is View, Preferred language is View, Sign in sessions valid from date t... is Jun 18, 2026, 2:55 PM, Last password change date time is Jun 18, 2026, 2:55 PM, Invitation state is External user state change date ti..., Password policies is View, Password profile is View, Authorization info is View, Job Information is Finance Analyst, Company name is GHOSTD Corp., Department is Finance, Employee ID is GHC027, Employee type is Full-Time, Employee hire date is Jun 18, 2026, 12:00 AM, Employee org data is Remote, Office location is Remote, Manager is Mia Carter, and Sponsors are View. The Contact Information section shows Street address, City, State or province, ZIP or postal code, Country or region, Business phone, Mobile phone, Email, Other emails, Proxy addresses, Fax number, IM addresses, Mail nickname, and Candace.Jones. The Parental controls section shows Age group, Consent provided for minor, and Legal age group classification. The Settings section shows Account enabled (Yes), Usage location, and Preferred data location. The On-premises section shows On-premises sync enabled (No), On-premises last sync date time, On-premises distinguished name, Extension attributes, On-premises immutable ID, On-premises provisioning errors, On-premises SAM account name, On-premises security identifier, On-premises user principal name, and On-premises domain name.

What Was Done:

Candace Jones' user profile was updated to reflect a department transfer from Engineering to Finance. The job title was changed from Software Engineer to Finance Analyst and departmental attributes were modified to align with the employee's new business function.

Why It Matters:

Identity attributes serve as the foundation for role-based access control (RBAC). Maintaining accurate user attributes ensures that access decisions are aligned with business responsibilities and supports proper access governance throughout the employee lifecycle.

Evidence:

- Before screenshot showing Engineering department assignment
- After screenshot showing Finance department assignment
- Updated user profile attributes within Microsoft Entra ID

Step 2 — Remove Old Group and Add New Group

What Was Done:

Engineering-related security group memberships were removed and replaced with Finance-related group memberships. The user was removed from Engineering Team and GitHub Developers and added to the Finance Team security group.

Why It Matters:

When employees change roles, legacy access must be removed to prevent privilege accumulation. Failure to remove outdated permissions can create security risks and violate the principle of least privilege.

Evidence:

- Group membership screenshots before role transition
- Group membership screenshots after role transition
- Validation showing Engineering access removed and Finance access added

Step 3 — Add Finance Access

The screenshot shows the Microsoft Entra admin center interface. The left sidebar contains navigation links for Home, Security Copilot agents, Security Copilot chat, Favorites, and a list of categories including Entra ID, Overview, Users, Groups, Devices, Agents, Enterprise apps, App registrations, Roles & admins, and Delegated admin partners. The main content area is titled 'Candace Jones | Applications' and shows a table of application assignments for the user Candace Jones. The table has columns for Name, Role, Assignment, and Date. The assignments listed are Workday (Default access, Directly assigned, 6/19/2026), Slack (User, Directly assigned, 6/18/2026), and Netsuite (User, Directly assigned, 6/19/2026). The 'Applications' link in the left sidebar is highlighted.

Name	Role	Assignment	Date
Workday	Default access	Directly assigned	6/19/2026
Slack	User	Directly assigned	6/18/2026
Netsuite	User	Directly assigned	6/19/2026

What Was Done:

Finance-specific application access was provisioned to support the employee's new responsibilities. Access to Workday and NetSuite was assigned while Engineering-related application access was removed.

Why It Matters:

Application access must align with business responsibilities. Provisioning only the applications required for the Finance Analyst role reduces unnecessary exposure and supports least privilege principles.

Evidence:

- Workday application assignment
- NetSuite application assignment
- User application inventory showing Finance application access

Step 4 — Validate No Toxic Access

Access Item	Expected State	Actual State	Result
Engineering Team	Removed	Removed	Pass
GitHub Developers	Removed	Removed	Pass
GitHub Enterprise	Removed	Removed	Pass
Atlassian Cloud	Removed	Removed	Pass
Finance Team	Added	Added	Pass
Workday	Added	Added	Pass
NetSuite	Added	Added	Pass
All Employees	Retained	Retained	Pass
Slack	Retained	Retained	Pass

What Was Done:

A post-transition access review was conducted to verify that all Engineering-related permissions were removed and that Finance-related permissions were correctly assigned. Group memberships and application assignments were reviewed to ensure no unauthorized or excessive access remained following the role change.

Why It Matters:

Role transitions are a common source of privilege accumulation. Performing an access review after a department transfer helps enforce least privilege principles, reduces security risk, and supports compliance requirements.

Evidence:

See above table.

Phase 3 Outcome

Result: Successful

Candace Jones was successfully transitioned from the Engineering access model to the Finance access model.

Access Removed

- Engineering Team
- GitHub Developers
- GitHub Enterprise
- Atlassian Cloud

Access Added

- Finance Team
- Workday
- NetSuite

Access Retained

- All Employees
- Slack

Validation confirmed that Engineering-related access was removed and that no excessive privileges remained following the transfer.

No toxic access conditions were identified. Access was aligned with the principle of least privilege and validated against the approved Finance access model.
